

## LESSON: Plant Life Cycles

Ages 5 - 8 years

Grades K to 4

In this lesson you will learn:

- Living things have life cycles adapted to and can sense their environment
- Make and record observations,
- Sort and classify data using drawings
- Transfer and apply learning to new situations

All plants are living things and have a life cycle (live and die).

***Can you think of other things that have a life cycle?***

Some plants live less than a year like sunflowers and beans, while others can keep surviving and growing year to year like trees!

**ACTIVITY: *Let's Grow Beans.*** Investigate the germination process and the different stages of a bean's life cycle.
